## Makita fast charger dc9700a manual model number parts list

The foam pre-filter should be checked and cleaned daily or at least every four operating hours when cutting with high dust amounts. Note that Sync Lock™ software is not compatible with Macintosh computers. There are three light-indicators on your Sync Lock™ Terminal:1. Registration: Set new PIN numbers for your batteries and/or Terminal.2. Timer: Assign lock-out schedules to your batteries. It's worth noting that there is no added cost for Makita batteries compatible with Sync Lock™. The paper air filter insert can be slightly opened and tapped against a clean surface, but should never be washed. Note also that the software will not operate on tablets or mobile devices of any kind. Best Practices Leave the Registration Cross PIN at the default setting of four zeroes (0 0 0 0). Hammer drills are best used for setting small anchors in unreinforced concrete, as well as stucco, masonry, and block wall. The Sync Lock™ is a theft-deterrent system that creates a strong incentive for your workers not to take batteries off the job site. Each Makita Lithium-Ion Power Tool, Battery and Charger is warranted to be free of defects from workmanship and materials for the period of THREE YEARS from the date of original purchase. Does the Sync Lock™ Terminal charge my battery? By using a non-genuine Makita "knock-off" battery or batteries that have been altered, the sophisticated electronic communication system between the battery and charger as well as between the battery and the tool may be defeated. Be sure that your software is open on your desktop. Rotary hammers are engineered for use on both reinforced and unreinforced concrete, as well as stucco, masonry, and block wall. The smaller inner filter can be washed in lukewarm soapy water with regular dishwashing liquid or Makita filter cleaner, and allowed to air dry. For more information, contact the Makita Call Center, located in Buford, Georgia, at (800)4-MAKITA. Hypoid gears, like those in the Makita 5377MG 7-1/4" Magnesium Hypoid Circular Saw, are engineered with heat-treated hypoid steel gears designed to last longer and prevent premature wear often found in traditional bronze-alloy worm-drive gears. In fact, many job sites consider use of mobile devices a distraction and are creating guidelines to restrict their use during working hours. Makita Lithium-Ion batteries are manufactured to strict standards, and are engineered with internal electronic circuitry to monitor the battery conditions when in use with Makita tools and chargers. If the Instruction Manual or Parts Breakdown is not listed please contact the National Call center, located in Buford, Georgia, at (800)462-5482. Consult the grinder's Instruction Manual to determine the proper guard. You will be taken to the product detail page of the model entered. Note that your Terminal will show a warning light when the battery is low (image at right). In order to use a cut-off wheel, the Makita grinder must be equipped with an approved cut-off wheel guard for the particular grinder. Battery Can I overcharge a battery? Yes. As mentioned, we recommend that you leave the Registration Cross Pin at the default setting of four zeroes for ease-of-use. This will result in:- Voiding the Makita Warranty for the Makita tool and charger- Voiding the UL/CSA Standards approval of the tool/When using non-genuine Makita batteries, there is also a risk of:- The battery bursting that may result in personal injury and/or property damage- Possible fire damage to the tool, the battery and/or the charger- Unknown tool performanceMakita bears no liability for accidents, personal injury or property damage (or damage to batteries, tools or chargers) that occurs as a result of the use of "knock-off" batteries, or batteries that have been repaired or altered in any way. If you changed the Registration Cross PIN from the default setting of four zeroes (0 0 0 0), you will need to change it back to the default PIN. See the Quick Start Guide for additional information.
